Case No. 3:10-cv-03561 WHA

**GOOGLE'S RESPONSE REGARDING
THE FOURTH FAIR USE FACTOR (ECF
NO. 1598)**

Dept. Courtroom 8, 19th Fl.
Judge: Hon. William Alsup

1 The Court has requested memos from the parties addressing whether “the fourth fair use
2 factor, which considers ‘the effect of the use upon the potential market for or value of the
3 copyrighted work,’ focuses on *the potential market for or value of the copyrighted work itself* as
4 opposed to *uncopyrighted hypothetical products that might have included elements of the*
5 *copyrighted work in an alternate universe.*” Request for Response Re Fourth Fair Use Factor
6 (ECF No. 1598) (emphasis added). The Court has further requested a summary of “specific
7 evidence that will be presented on this specific question.” *Id.*

8 The short answer is that for purposes of this case, the fourth fair use factor is the effect of
9 Google’s use of the declarations/SSO from the 37 Java SE API packages on the potential market
10 for or value of *Java SE 1.4 and Java SE 5.0* (the copyrighted works at issue), and that this does
11 not include harm to uncopyrighted hypothetical products (that might have included some of the
12 declarations/SSO from the 37 Java SE API packages) that were not part of the traditional,
13 reasonable, or likely to be developed market for Java SE 1.4 and Java SE 5.0. To explain why
14 this is so, Google will first discuss cases addressing the fourth factor generally, then apply this
15 law to the Court’s specific question, including a summary of the types of evidence Google
16 expects to present on this issue.

17 That evidence will show that the market for smartphones was not a traditional, reasonable
18 or likely to be developed market for Java SE. Sun and Oracle’s efforts to enter that market were
19 utterly unsuccessful. Further, Java ME—which is not even one of the copyrighted works at
20 issue—was never intended for the smartphone market, and smartphone manufacturers and
21 consumers have no use for Java ME for *that* reason, not because of Google’s use of
22 declarations/SSO from Java SE API packages. Moreover, harms that resulted from Sun’s own
23 failure to invest in its Java platforms cannot be attributed to Google’s use. Finally, because Sun
24 chose to release an open source version of Java SE months *before* Android launched, any
25 purported harm to the market for Java SE must be based on *differences* between Google’s use and
26 the use allowed by the royalty-free OpenJDK license – and the declarations/SSO are the *same* for
27 Android and OpenJDK. Accordingly, the evidence thus will show that the fourth fair use factor
28 favors Google, not Oracle.

I. FOURTH FAIR USE FACTOR GENERALLY

The fourth fair use factor is “the effect of the use upon the potential market for or value of *the copyrighted work*.” 17 U.S.C. § 107(4) (emphasis added). The Federal Circuit, in the prior appeal in this case, quoted the Supreme Court’s statement that the fourth factor reflects the idea that fair use generally “is limited to copying by others which does not materially impair the marketability of *the work which is copied*.” *Oracle Am., Inc. v. Google Inc.*, 750 F.3d 1339, 1376 (Fed. Cir. 2014) (quoting *Harper & Row, Publishers, Inc. v. Nation Enters.*, 471 U.S. 539, 566-67 (1985)) (emphasis added). Though in 1985, the Supreme Court said that this factor is “the single most important element of fair use,” *Harper & Row*, 471 U.S. at 566, it more recently explained that “[m]arket harm is a matter of degree, and the importance of this factor will vary, not only with the amount of harm, but also with the relative strength of the showing on the other factors.” *Campbell v. Acuff-Rose Music, Inc.*, 510 U.S. 569, 590 n.21 (1994).

Because the fair use inquiry relates to the rights an author has under the Copyright Act, the potential markets for the asserted work that are considered for purposes of the fourth factor must “be confined to those uses within the Copyright Act’s grant of rights in Sections 106 and 106A, as limited by Sections 107 to 122.” 4 Patry on Copyright § 10:151. One of those rights is the right to prepare derivative works, 17 U.S.C. § 106(2), and thus the market for derivative works of the asserted work can potentially be considered. *Harper & Row*, 471 U.S. at 568. But because fair use is an affirmative defense, it has application only if the defendant’s use could otherwise be found to infringe. Thus, if the very use in which the defendant has engaged is considered to be in the market for derivatives of the asserted work, the fourth factor becomes circular. *See Ringgold v. Black Ent. Television, Inc.*, 126 F.3d 70, 81 (2d Cir. 1997). To avoid this “danger of circularity,” courts have limited the markets to be considered under the fourth factor to “traditional, reasonable, or likely to be developed markets.” *Id.* (quoting *Am. Geophysical Union v. Texaco Inc.*, 60 F.3d 913, 930 (2d Cir. 1994)); *see also Seltzer v. Green Day*, 725 F.3d 1170, 1179 (9th Cir. 2013) (adopting “traditional, reasonable, or likely to be developed” limitation from *Ringgold*). Thus, for example, the market for derivative works that the copyright owner is *unlikely* to develop or license is not relevant to the fourth factor.

1 *Campbell*, 510 U.S. at 592. Google notes that its Motion *in Limine* No. 4 to Exclude Market
 2 Harm Testimony from Expert Report of Dr. Adam Jaffe (ECF. No. 1561) also addresses the
 3 proper scope of evidence under the fourth fair use factor, and thus that the Court may want to
 4 consider the briefing on that motion, as well.

5 Similarly, the fourth fair use factor is not concerned with “harm” to interests not protected
 6 by the Copyright Act. For example, a copyright owner might want to exercise control over a
 7 market for its copyrighted goods, but copyright law “does not confer such a monopoly.” *Sony*
 8 *Computer Ent. v. Connectix Corp.*, 203 F.3d 596, 607 (9th Cir. 2000). To the contrary, “an
 9 attempt to monopolize the market by making it impossible for others to compete runs counter to
 10 the statutory purpose of promoting creative expression and cannot constitute a strong equitable
 11 basis for resisting the invocation of the fair use doctrine.” *Sega Enters. Ltd. v. Accolade, Inc.*,
 12 977 F.2d 1510, 1523-24 (9th Cir. 1993). Instead, where a defendant’s use is transformative and
 13 does not merely supplant the copyright owner’s work, the fourth factor will favor the defendant
 14 *even if its use results in economic loss to the copyright owner. Sony*, 203 F.3d at 607.

15 And where a defendant’s work is comprised of far more than just the allegedly infringing
 16 material, “the relevant market effect is that which stems *from defendant’s use of plaintiff’s*
 17 *‘expression,’* not that which stems from defendant’s work as a whole.” *Arica Inst., Inc. v.*
 18 *Palmer*, 970 F.2d 1067, 1078 (2d Cir. 1992) (emphasis added); *see also Wright v. Warner Books,*
 19 *Inc.*, 953 F.2d 731, 739 (2d Cir. 1991) (holding that the “effect on the market must be attributable
 20 to the [alleged infringement]”). In *Arica*, the Second Circuit held that a jury could find that three
 21 passages from the allegedly infringing work were substantially similar to passages from the
 22 copyrighted work. 970 F.2d at 1073-74. The court further held that the plaintiff’s decision to
 23 apply nine labels to the nine points on a figure (which choice was also made by the defendant)
 24 was copyrightable, even though the labels and the figure, considered separately, were not
 25 copyrightable. *Id.* at 1076-77. In considering the fourth fair use factor, the court concluded that
 26 the defendant’s work could well compete with the copyrighted work, but that the fourth factor
 27 nonetheless favored fair use. *Id.* at 1078. “Defendant, after all, is perfectly entitled to create a
 28 competing work.” *Id.* For purposes of the fourth fair use factor, the issue was not simply whether

1 the works compete, but whether the *defendant's infringing use* caused harm. Considering just
 2 “the three passages and the decision to combine the labels with the enneagram figure,” the court
 3 concluded there would be only “a negligible effect on the market” for the copyrighted work.
 4 Because only “marginal amounts” of the plaintiff’s expressive content were copied,
 5 “[i]mpairment of the market for these works is unlikely.” *Id.* (quoting *Wright*, 953 F.3d at 739).

6 In short, not all economic harms are relevant to the fourth fair use factor analysis. Instead,
 7 “[t]he fourth factor disfavors a finding of fair use only when the market is impaired because the
 8 quoted material serves the consumer as a substitute, or, in Story’s words ‘supersede[s] the use of
 9 the original.’” Pierre N. Leval, *Toward a Fair Use Standard*, 103 Harv. L. Rev. 1105, 1125
 10 (1990) (quoting *Folsom v. Marsh*, 9 F.Cas. 342 (C.C.D. Mass. 1841)). To “affect the market for
 11 the original in a way cognizable under this factor,” the use must “substitute for it.” *Campbell*, 510
 12 U.S. at 591; *see also Authors Guild, Inc. v. HathiTrust*, 755 F.3d 87, 99 (2d Cir. 2014) (“The only
 13 market harms that count are the ones that are caused because the secondary use serves as a
 14 substitute for the original, not when the secondary use is transformative (as in quotations in a
 15 book review).”). Where a defendant’s use diminishes the market’s opinion of the original—for
 16 example, a critical review, or a scathing parody—that economic impact is not part of the fourth
 17 factor analysis. *Fisher v. Dees*, 794 F.2d 432, 437-38 (9th Cir. 1986).

18 **II. APPLICATION OF THE FOURTH FAIR USE FACTOR IN THIS CASE AND** 19 **THE EVIDENCE THAT WILL BE PRESENTED ON THIS ISSUE**

20 In this case, the copyrighted works are Java SE 1.4 and Java SE 5.0. Order re Google’s
 21 Mot. to Strike (ECF No. 1479) at 1. (“SE” stands for “Standard Edition,” and refers to Oracle’s
 22 Java platform for *desktop computers*. Trial Tr. at 365:22-24 (Kurian); *see also id.* at 386:18-19.)
 23 The fourth fair use factor therefore looks at the effect of Google’s use on the potential market for
 24 or value of *Java SE 1.4 and Java SE 5.0*. *See* 17 U.S.C. § 107(4). This factor can include
 25 consideration of the effect on the market for derivative works of Java SE 1.4 and Java SE 5.0, but
 26 only to the extent that the evidence shows that such markets are “traditional, reasonable, or likely
 27 to be developed.” *Seltzer*, 725 F.3d at 1179. Oracle has not shown any such evidence, and thus
 28 cannot argue purported market harm based on “uncopyrighted hypothetical products that might

1 have included elements of the copyrighted work in an alternate universe.” Request for Response
 2 Re Fourth Fair Use Factor (ECF. No. 1598).

3 Moreover, in the prior trial, the jury found that Google’s use of the declarations/SSO from
 4 the 37 Java SE API packages in certain versions of Android would infringe Oracle’s copyrights in
 5 Java SE 1.4 and Java SE 5.0, subject to Google’s defense of fair use, on which it was unable to
 6 reach a verdict. In the upcoming trial, it will be the jury’s duty to resolve the question of fair use
 7 on which the prior jury hung. The question of fair use therefore is necessarily limited to the uses
 8 that were previously adjudicated and found to have been copied. The Court has already held that
 9 “our trial will *not* include implementations of Android in Android TV, Android Auto, Android
 10 Wear, or Brillo.” Order re Google’s Mot. to Strike (ECF No. 1479) at 2. Because the prior jury
 11 did *not* consider the extent to which the declarations/SSO are used by Google in Android TV,
 12 Android Auto or Android Wear, the jury should not consider the alleged effect of such uses on
 13 the potential market for or value of Java SE 1.4 and Java SE 5.0. (The same is true for Brillo, but
 14 Oracle no longer seeks to make Brillo part of the retrial. *See* Oracle’s Opp. to Google’s MIL #2
 15 (ECF No. 1612-3) at 1 n.1.)

16 **A. Alleged harm to a market that Sun and Oracle were demonstrably unable to**
 17 **enter with Java SE is irrelevant to the fourth fair use factor.**

18 Google’s use cannot substitute for a hypothetical use of Java SE that Oracle was unable to
 19 bring to market. *Seltzer*, 725 F.3d at 1179. Google will present evidence and testimony from
 20 Sun/Oracle that its own efforts to enter the smartphone market failed. *See, e.g.*, TX 2044
 21 (“Project Java Phone”); Trial Tr. at 1908:24-1915:18 (Gering) (Sun never brought a product to
 22 market based on SavaJe technology; Sun’s Project Daneel, which would have integrated a Sun
 23 virtual machine into Android, never made it to market). Oracle was never able to bring a “full-
 24 stack” mobile platform to the market. *See, e.g.*, Tr. at 1912:11-13 (Gering), 1939:11-12 (Rizvi).
 25 Google expects that witnesses such as Oracle Vice President for Product Management Henrik
 26 Stahl and Vice President for Worldwide Java Business Mike Ringhofer will offer similar
 27 testimony, including testimony by Mr. Ringhofer that [REDACTED]
 28 [REDACTED]

1 Indeed, the evidence will show that Android succeeded in part because it created a *new*
 2 market rather than competing with Java SE. For example, Google’s expert Dr. Astrachan will
 3 testify that Java SE and Android have different technical features, which address different
 4 technical needs. Google also anticipates that witnesses such as Oracle Senior Principal
 5 Technologist and Product Manager Terrence Barr will confirm that [REDACTED]

6 [REDACTED]
 7 Google expects that Oracle witnesses such as Mr. Stahl [REDACTED]
 8 [REDACTED]
 9 [REDACTED]

10 And because Oracle cannot rely on alleged harm to the smartphone market, given that the
 11 smartphone market was not a “traditional, reasonable, or likely to be developed” market for Java
 12 SE, *Seltzer*, 725 F.3d at 1179, neither can it rely on alleged harms that are several further steps
 13 away in a speculative causal chain that supposedly resulted from Google’s entry into the
 14 smartphone market. Oracle argues that Android’s popularity—in the *smartphone* market—has
 15 allowed it make Android TV, Android Auto, and Android Wear popular, too. *See* Oracle’s Opp.
 16 to Google’s MIL #2 (ECF No. 1612-3) at 6. Again, the Court has already rule that “our trial will
 17 *not* include” these implementations. Order re Google’s Mot. to Strike (ECF No. 1479) at 2.
 18 Moreover, these uses do not merely supplant Java SE— Java SE does not have comparable
 19 products on the market, and evidence does not suggest that creation of such products using Java
 20 SE would be likely to be developed. (Google will address some of Oracle’s erroneous
 21 assumptions in this regard in its reply in support of its motion *in limine* #2.) Moreover, Android
 22 TV, Android Auto, and Android Wear are possible only because of Android’s substantial and
 23 transformative creation of a complete mobile stack. And economic harm caused by a
 24 transformative use is not relevant to the fourth fair use factor. *See Sony.*, 203 F.3d at 607-08
 25 (finding that the fourth factor favored the defendant where the market harm argued by the
 26 copyright owner was due to “legitimate competit[ion]” by a transformative use).
 27
 28

B. Alleged harm to the market for Java ME is irrelevant to the fourth fair use factor.

Oracle cannot rely on harm to a market for a different work, Java ME. Unsurprisingly, the prior jury did not find that Google infringed Java ME, because Oracle did not assert infringement of Java ME. Instead, *Java SE 1.4 and Java SE 5.0* are the copyrighted works at issue, and thus the fourth fair use factor considers the harm to the market for *those* works, not to the market for Java ME. Moreover, because the issue is whether Google's use of the declarations/SSO from the 37 Java SE API packages is fair, any consideration of harm to the market for derivative works should focus on the harm to derivative works *for the declarations/SSO from the 37 Java SE API packages*. Oracle's Chief Corporate Architect Edward Screven testified that the set of class libraries in Java ME is very different from the set of class libraries in Java SE. *See* Trial Tr. at 536:8-13 (Screven).

Furthermore, any harm to the market for Java ME is due to changes in what the consumers want, not due to Android's use of the declarations/SSO. Mr. Screven testified that Java ME was designed for devices that could not run Java SE. *Id.* at 536:5-7. He also testified that *today* smartphone manufacturers and customers are not interested in Java ME because smartphones are far more capable than the devices targeted by Java ME. *Id.* at 541:3-6. Google expects that other Oracle witnesses, such as Mr. Ringhofer, will offer similar testimony.

C. Harm that was caused by Oracle's own failure to invest in Java is irrelevant, because such harm was not caused by Google's use.

The evidence will further show that Sun failed to invest in Java. *See, e.g.,* TX 3508 at 3 (Sun presentation noting, "Sun's leadership around Java is perceived as stagnant, and Java is considered legacy."). Google anticipates that Oracle witnesses such as Mr. Barr will confirm that

Google expects to elicit testimony from Oracle witnesses that

Google also anticipates that Oracle witnesses such as Mr. Stahl will also testify that

D. Google cannot have harmed the market for Java SE by engaging in uses of the declarations/SSO that are allowed by the OpenJDK license.

Google will call its open source licensing expert Andrew Hall, as well as Sun/Oracle witnesses such as former Sun Chief Open Source Officer Simon Phipps, to testify about OpenJDK. This evidence will show that months *before* Android launched, Sun chose to publish an open source version of Java SE, called OpenJDK, that includes *all* of the declarations/SSO at issue in this case; that the OpenJDK license is royalty-free; that licensees are free to “subset” or “superset” the Java SE APIs; that Sun knew that the “copyleft” effect of the license did not extend to software that merely “links” with the OpenJDK class libraries; and that Sun’s business plan was to compete by monetizing “Java branded” versions of the Java SE platform.

In short, Google will establish that any alleged “harm” (if any exists) from its use of the declarations/SSO would be no different from the “harm” to Java SE already invited by Sun itself, *months before Google launched Android*. To the extent that Android had an effect on the market for Java SE beyond that self-inflicted harm, such effect must be due to features Android does *not* share in common with Java SE and OpenJDK—harm that would not be cognizable under the fourth fair use factor, because it necessarily would need to be due to expression *other* than what is freely licensed in OpenJDK. *Arica*, 970 F.2d at 1078.

E. Google will establish that its use is highly transformative, that the declarations/SSO are highly functional, and that it used only a small amount of Java SE that is necessary to ensure that developers can write software code using in the Java programming language in the manner to which they are accustomed.

As the Supreme Court noted in *Campbell*, the importance of the fourth factor will vary with the relative strength of the showing on the other fair use factors. 510 U.S. at 590 n.21. Accordingly, Google’s showing on the other fair use factors is relevant to the jury’s consideration of the fourth fair use factor. Because the Court asked the parties to summarize the evidence that will be presented on the *specific* issue of market harm, Google will not summarize the showing it expects to make on the other fair use factors, but merely notes that its showing on the other fair

1 use factors will have an indirect bearing on consideration of the fourth fair use factor. In
2 particular, “[t]he more transformative the new work, the less will be the significance of other
3 factors, like commercialism, that may weigh against a finding of fair use.” *Id.* at 579; *see also*
4 *Oracle Am.*, 750 F.3d at 1375; *Kelly v. Arriba Soft Corp.*, 336 F.3d 811, 818 (9th Cir. 2003);
5 *Perfect 10, Inc. v. Amazon.com, Inc.*, 508 F.3d 1146, 1166 (9th Cir. 2007) (all citing *Campbell*).
